

PRODUCT DATASHEET

Backup Agent

Backup made simple.

The bottom half of the page features two large, abstract blue geometric shapes. On the left, a medium blue triangle points towards the center. On the right, a darker blue shape, resembling a large arrow or a stylized 'V', points towards the center, creating a sense of depth and movement.

Is your backup solution merely a mirage?

Organizations — A significant portion (**70%**) of organizations are poorly positioned in terms of disaster recovery (DR) capabilities, with **66%** likely suffering from “mirages of overconfidence”.¹

DISCOVER BACKUP AGENT

PLUG-AND-PLAY BACKUP

Deploy daily automated backups for Bare Metal servers (Linux and Windows) in under 10 minutes. Vault creation and management (based on Object Storage buckets) are fully automated and handled by OVHcloud®.

NO HIDDEN FEES

The only charge is OVHcloud Object Storage at **\$0.0079/GiB/month**². There are no fees for agents, incoming or outgoing traffic, distant backup, encryption, or restoration.

INCREASED BACKUP RELIABILITY

Centralized visibility across all backups helps you quickly identify and address issues. Optional daily email reports keep you informed of backup health without requiring constant monitoring.

² The indicated price of \$0.0079 per GiB is a rounded estimation based on the average monthly duration of 730 hours (calculated from a 365-day year) and on the Object Storage Standard class (1AZ) tariff. This information is provided for reference only. The final cost depends on your actual duration of consumption, as pricing is usage-based. For the details, please refer to the [Object Storage pricing page](#).

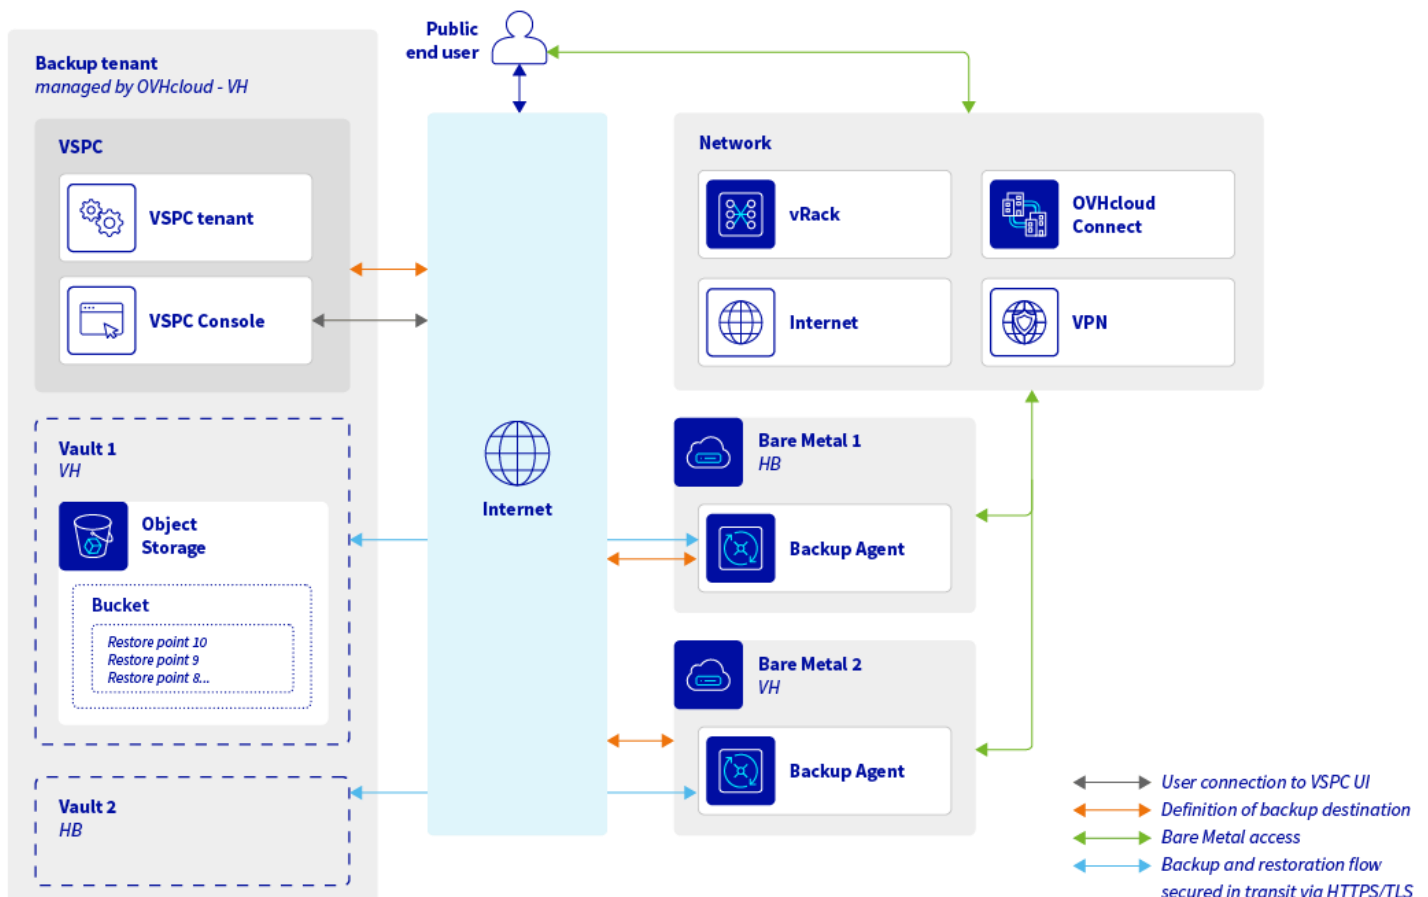

Built for performance, designed for simplicity

Explore the technical capabilities of Backup Agent, including its architecture, features, and operational benefits. This overview explains how to efficiently deploy OVHcloud's managed backup solution for Bare Metal environments.

ARCHITECTURE BUILT FOR RESILIENCE

To improve resilience, backup data is stored in a dedicated Backup Vault located in a different OVHcloud region than the protected Bare Metal server. For example, servers hosted in Vint Hill (East Coast) can be backed up to Hillsboro (West Coast), while servers hosted in Hillsboro can be backed up to Vint Hill. This geographic separation helps protect backup data from regional outages and disruptions.

Your data is managed exclusively by OVHcloud. Veeam's technology is used solely to orchestrate backup placement and policies — never to access or store customer data.

SECURITY AND COMPLIANCE YOU CAN TRUST

DATA RESIDENCY THAT IS SECURE

Customer data remains in OVHcloud data centers and is never shared with Veeam¹.

RETENTION POLICY

Choose between 14 or 30 days of data retention, depending on business and compliance requirements.

ENCRYPTION-SECURE

Protect data using OVHcloud-managed SSE-OMK encryption, combining strong security with operational simplicity.

AUTOMATIC ALERTS

Receive daily status reports highlighting backup success, failures, or potential risks.

RELIABLE, IMMUTABLE STORAGE

Backups are stored on Object Storage across up to three vaults per customer, with 14 days of immutability (WORM) and bucket-level encryption.
